EDUCATION

FAST-NUCES

Bachelor of Science in Computer Science

Lahore, Pakistan

2023 – Present

Relevant Coursework: Artificial Intelligence, Machine Learning, Natural Language Processing, Data Structures & Algorithms, Database Systems, Software Engineering

EXPERIENCE

Founder and Solo Developer

2026 – Present

Menuva – WebAR Restaurant Platform

[menuva-app.vercel.app](#)

- Conceptualized and designed Pakistan's first WebAR restaurant menu platform enabling 3D dish visualization and AI-powered upselling; built a functional frontend prototype independently in under 4 weeks.
- Developed and launched a product landing page articulating the full value proposition, pricing model, and go-to-market strategy for the Pakistani F&B market.
- Conducted early customer discovery through informal conversations with restaurant operators to explore demand, pricing sensitivity, and deployment feasibility.

Campus Ambassador

2026 – Present

System Heuristics

- Represent an AI and software solutions firm on campus, promoting tech opportunities and running awareness events for students and faculty.

Campus Ambassador

2026 – Present

National Incubation Center Lahore (NICL)

- Represent one of Pakistan's leading startup incubators on campus, connecting student founders with entrepreneurship resources and incubation pathways.

PROJECTS

Threads Lead-Generation & Outreach Pipeline | Python, Playwright, BeautifulSoup4, GitHub Actions, Google Sheets 2026

- Built an automated daily scraper using Playwright and headless Chromium to query Threads for web development, automation, and AI client leads, then parse and clean raw results with BeautifulSoup4.
- Designed a rule-based lead-scoring engine that classifies prospects into hot, warm, and discard tiers (and flags competing sellers), writing structured output to Google Sheets via API for downstream outreach.
- Scheduled the pipeline via GitHub Actions to run daily at 11:00 AM with automated email run-reports, including execution time tracking to monitor and optimize free-tier compute usage.
- Currently extending the system with an LLM-based reply generator for hot leads, pending pipeline efficiency validation against collected data.

Threads Auto-Posting Bot | Python, OpenRouter, Zernio API, Telegram Bot API, Render

2026

- Developed a Telegram-driven content bot that ingests informal startup progress updates and generates curated, platform-optimized posts for Threads using an LLM via OpenRouter.
- Integrated the Zernio API to publish generated content to Threads automatically, removing manual posting from the workflow.
- Deployed the service on Render for continuous 24/7 availability, with Telegram as the conversational interface for on-the-go content submission.

Prompt Injection Detection System | DistilBERT, Transformers, NLP, Streamlit

2025

- Trained and benchmarked 5 machine learning models, achieving 90.5% accuracy and 0.96+ AUC on a 10K+ sample dataset.
- Built custom NLP preprocessing pipeline including tokenization, lemmatization, and filtering.
- Deployed real-time Streamlit application with ensemble voting, reducing misclassification rate by approximately 12%.

RAG Codebase Assistant | Python, ChromaDB, OpenRouter

2026

- Built retrieval-augmented generation (RAG) pipeline from scratch, including ingestion, chunking, embedding, and retrieval.
- Indexed and queried code chunks using vector search with ChromaDB.
- Enabled multi-turn contextual querying, improving response relevance by approximately 30%.

E-Commerce Automation Pipeline | n8n, AI Agents, WhatsApp API, Google Sheets

2025

- Developed end-to-end automation pipeline covering inquiry, order processing, invoicing, and follow-ups.
- Built AI chatbot handling 100+ simulated customer queries per day with real-time inventory checks.
- Implemented abandoned-chat recovery workflows, increasing potential conversion rates by 20–25%.

Talent AI – AI-Powered Job Matching Platform | React, Redux, Node.js, REST APIs, AI

2026

- Team project: building a dual-sided job matching platform that uses AI to auto-extract context from resumes and job listings, then ranks matches with a relevance score for both job seekers and recruiters.

TECHNICAL SKILLS

AI / Machine Learning Fine-tuning LLMs, RAG Pipelines, ChromaDB, NLP, Transformers

Automation n8n, AI Agents, Workflow Automation, LangGraph, Web Scraping (Playwright, BeautifulSoup4), GitHub Actions (CI/CD)

Full Stack React, Redux, Node.js, Express, MongoDB, SQL, REST APIs

Languages Python, JavaScript, Java, C++, x86 Assembly

Tools Git, GitHub, Render, ClickUp, Antigravity, Claude Code, Gemini CLI, Opencode, Colab, Kaggle, Hugging Face

AI-Assisted Development: Use agentic tools (Claude Code, Gemini CLI) as a force multiplier – architecting the system, owning the core logic and product decisions personally, while delegating implementation to AI agents to ship faster.
